

OnlyKey DUO - Portable Protection For All of Your Devices

Raleigh, NC -- 09/07/2021 -- CryptoTrust (<https://crp.to>), the maker of OnlyKey, is back with a new player in the physical security key space: OnlyKey DUO. With the same features users love about OnlyKey, OnlyKey DUO is one of the most versatile security keys available and in a small form factor that now supports both USB-A and USB-C.

An increasing amount of invaluable data and assets are stored online, from personal photos and financial information to proprietary corporate documents and software, and your accounts can be easily compromised. Phishing attacks in particular continue to be a huge problem. OnlyKey DUO can help you block phishing attacks in multiple ways. With OnlyKey DUO, you can do more than just *hope* your accounts are safe; you can *take control* of your online security.

Fast and Easy to Use

No need to install any software. You can use your OnlyKey DUO immediately for two-factor authentication and passwordless login (FIDO2) supported by major websites such as Microsoft, Google, Facebook, Dropbox, GitHub, Okta, AWS and more. Google and other vendors have recently come out with security keys that support either USB-A or USB-C so users end up buying two security keys or are forced to use an adapter. OnlyKey DUO is like two keys in one. It natively supports both USB types and it is one of the smallest and most portable security keys out there.

The Ultimate Security for Professionals

OnlyKey, the original open-source security key, is trusted worldwide by thousands of professionals and was recently highlighted as "the ultimate security key for professionals" by ZDNet! Various privacy-focused books and publications have featured OnlyKey, and it was recently selected by TechRadar "Best security key 2021: hardware keys for top online protection".

Industry-Leading Features

OnlyKey DUO isn't your run-of-the-mill security key. The proof is in the features. It supports FIDO2 as well as an array of other amazing features such as a hardware password manager, multiple two-

factor methods, passwordless SSH login, and OpenPGP. Find out more about OnlyKey DUO from <https://www.kickstarter.com/projects/timsteiner/onlykey-duo-portable-protection-for-all-of-your-devices> or purchase OnlyKey from <https://onlykey.io> to get started.

CryptoTrust Founder, Tim Steiner.
